

## Agosi in brief

At its Pforzheim location, Allgemeine Gold- und Silberscheideanstalt AG sees itself as a long-established constant in the precious metal business, as an important manufacturer of semi-finished precious metals products, and raw-material supplier of gold, silver, platinum and palladium resulting from Agosi's in-house refining processes - a classical single-source solution.

Based on the environmentally sound recycling of precious metals bearing materials and the continuous development of innovative methods for precious metal analysis, production technology and quality management, all of Agosi's 400 employees are strongly committed to serving the precious metal consuming industries both at home and abroad.

Agosi is part of Umicore, Brussels. Umicore is a materials technology group and focuses on catalysis, recycling, energy and performance materials in the high-tech industries with the overriding goal to produce "materials for a better life" by means of sustainable value creation.

With its subsidiaries in Austria, The Netherlands, Switzerland, Thailand, North and South America, Agosi represents the core of the Umicore Business Unit Jewellery & Industrial Metals (BU JIM). It provides a closed-loop concept of precious metals services, products and refining on a global scale.
